INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/EP2004/001870

IAP20 Rec'd PCT/PTO 08 JUN 2006 Box No. I Basis of the report 1. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item. This report is based on translations from the original language into the following language, which is the language of a translation furnished for the purposes of: ☐ international search (under Rules 12.3 and 23.1(b)) ☐ publication of the international application (under Rule 12.4) ☐ international preliminary examination (under Rules 55.2 and/or 55.3) 2. With regard to the elements* of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report): **Description, Pages** 1-22 as originally filed Claims, Numbers 1-31 received on 23.11.2004 with letter of 23.11.2004 **Drawings, Sheets** 1-12 as originally filed П a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing 3. The amendments have resulted in the cancellation of: ☐ the description, pages ☐ the claims, Nos. ☐ the drawings, sheets/figs ☐ the sequence listing (specify): ☐ any table(s) related to sequence listing (specify): 4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)). ☐ the description, pages ☐ the claims, Nos. ☐ the drawings, sheets/figs ☐ the sequence listing (specify): any table(s) related to sequence listing (specify):

If item 4 applies, some or all of these sheets may be marked "superseded."

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/EP2004/001870

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 1-33

No: Claims

Inventive step (IS) Yes: Claims 1-33

No: Claims

Industrial applicability (IA) Yes: Claims 1-33

No: Claims

2. Citations and explanations (Rule 70.7):

AP20 Rec'd PCT/PTO 08 JUN 2006 International application No.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/EP2004/001870

Re Item V.

- 1 The following documents are referred to in this communication:
 - D1: DATABASE CHEMABS CHEMICAL ABSTRACTS SERVICE, COLUMBUS, OHIO, US; AN 99:46283 CA 12 May 1984 (1984-05-12), C. PERRIN, M. SERGENT, J.C. PILET, F. LE TRAON, A. LE TRAON: "Structure-property relations in new Mo(III) and Mo(II) chalcohalogenides with Mo4 and Mo6 clusters" XP002283920
 - D2: DATABASE CHEMICAL ABSTRACTS CHEMICAL ABSTRACTS SERVICE, COLUMBUS, OHIO, US; AN 98:170737 12 May 1984 (1984-05-12), C. PERRIN, M. POTEL, M. SERGENT: "Molybdenum bromide sulfide (Mo6Br6S3): a new two-dimensional compound with octahedral Mo6-Clusters" XP002283921
 - D3: M. REMSKAR, . MRZEL, R. SANJINES, H. COHEN, F. LÉVY: "Metallic Sub-Nanometer MoS(2-x)I(y) Nanotubes" ADVANCED MATERIAL, vol. 15, no. 3, 2003, pages 237-240, XP002283919

NOVELTY:

The document D1 discloses the compound $Mo_6S_3Br_6$ (x+y=9), the structure comprising Mo_6 -Clusters and $[Mo_6S_4Br_4]$ -units. However, as D2 shows, the structure of $Mo_6S_3Br_6$ is a layered (i.e. two dimensional) one build up by $[Mo_6L_8]$ -Units.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

INVENTIVE STEP:

- 2.1. The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and discloses the compound Mo₆S₃Br₆ (x+y=9), which, as it is proven by D2, has a layered structure, from which the subject-matter of claim 1 differs in that the compounds are grown in form of nanowires, nanoropes, nanorods, whiskers or needles.
- 2.2. The problem to be solved by the present invention can be considered as to provide compounds of the formula $Mo_6S_yI_z$, 8.2<y+z<10 for use in nano-electrochemical

devices or sensors.

- 2.3. The solution proposed in claim 1 of the present application can be considered as involving an inventive step (Art. 33(3) PCT) for the following reasons :
- 2.4. D1 teaches, that a composition Mo₆S_yI_z, (x+y=10 or 12) cristallizes in form of extremely fragile needles, which due to their fragility would not be suitable for use in nano-electrochemical devices or sensors, even if they would have the necessary electrochemical properties. Document D3 discloses a Mo₆S_{2-y}I_z with a nanotube structure, however, the stoechiometry is different to the one claimed in the present application.
 - Therefore it appears, that the cited prior art does not give a hint or an advice of providing a compound ${\rm Mo_6S_yI_z}$, 8.2<y+z<10 with a nanowire or nanotube structure suitable for use in a nano-electrochemical devices and sensors.
- Claims 2-33 are dependent on or refer to claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

Claims

1. A material of the general formula $M_6C_yH_z$, wherein Midesignates a transition metal, C designates a chalcogen, H designates a halogen, and wherein y and z may be of from 0 to 10 such that 8.2 < y + z < 10, grown in the form of nanowires, nano-ropes, nanorods, whiskers or needles and obtainable by a process comprising the steps of mixing the constituent elements in the desired mass ratio, placing them in an appropriate container, evacuating the container and heating it to a temperature above 1000 °C for a predetermined length of time.

210

5

- 2. The material according to claim 1, wherein M is a transition metal selected from the group consisting of Mo, W, V, Ti, Ta, Nb, Zn, Hf, Re and Ru.
- 3. The material according to claim 1 or 2, wherein M represents a mixture of two or more
 - claimin 1
 - 2.4. The material according to preceding claims, wherein C = S, Se, Te.
- 3.8. The material according to preceding claims, wherein C represents a mixture of two or more chalcogens.
 - 4 \$6. The material according any of the preceding claims, wherein the halogen H= I, Br, Cl or F.
- 25 § 7. The material according to preceding claims, wherein H represents a mixture of two or more halogens.
- 6%. The material according to any of the preceding claims, wherein 0 < y < 10, 0 < z < 10 and $8.2 \le y + z < 10$.

DEST AVAILABLE COP

- 7 %. The material according to any of the preceding claims, wherein H may be replaced by an ion elected from the group consisting of elements in the groups III-VIII.
- 8 10. The material according to any of the preceding claims, additionally containing intercalated or interstitial ions, atoms or molecules, selected from the group consisting of alkali metals, alkaline-earth metals, transition metals, elements belonging to groups III-VIII and any organic donors or acceptors.
- 9 1. The material according to any of the preceding claims exhibiting a substantially circular cross-section.
 - 1012. The material according to any of the preceding claims, which is superconducting.
- The material according to any of the preceding claims, which is metallic or semiconducting. 15
- A method for the production of a material according to any of the claims 1 to 11, which comprises the steps of (i) mixing of the individual constituent elements, (ii) heating in a sealed container under reduced pressure, (iii) heating above a temperature of 1000 C or more for any duration of time.
- The method according to claim 41, wherein the elements themselves are replaced by compounds of those elements such as MoS₂ for example.
- 25/416. Use of a material according to any of the preceding claims in electronic, chemical, optical or mechanical applications.
 - 15 17. The use of a material according to any of the claims 1 to 13 as a catalyst in dry form or in suspension or as a catalytic component.
 - The use according to claim 16, wherein said use of said material is selected from the

HEST AVAILABLE CO

group consisting of a use in a field-emission device, in a superconducting application, in a proximity-coupled network, in a quantum interference network, in devices incorporating said material in 2-, 3-, 4- or multi-terminal configuration, and a use for enhancing electrical, optical, magnetic, mechanical and tribological properties of polymers and glasses by incorporating said material in said polymers and glasses.

The use according to claim 16, said material being used as a lubricating agent, optionally in combination with one or more further compounds, in particular oils.

A method of varying the material characteristics of a material according to any of the claims 1 to 25, said method comprising the steps of selecting composition parameters y and z, and/or incorporating dopants or substituents in said material.

5. 21. An electric device comprising

at least one material or material bundle arranged on a substrate, said material being a material according to any of the claims 1 to 13; and

at least one contact arranged on said substrate and passing over said at least one material or material bundle, said at least one contact being connected with or connectable to circuitry of the device.

- 2022. The device of claim 21, said device detecting physical or chemical influences acting on said at least one material or material bundle and/or said at least one contact.
- The 'device of claim 22, said device being adapted to detect physical or chemical influences selected from the group consisting of influences due to molecules attaching to and/or coming into contact with said at least one material or material bundle or said contact(s), light of different wavelengths, and mechanical influences.
- A method of arranging a material according to any of the claims 1 to 13 in a electric device, said method comprising the steps of

: 137 AVAILABLE CC:

~3

arranging at least one material or material bundle on a substrate; providing said at least one material or material bundle with one or more contacts, at least one of said one or more contacts being in connection with or connectable to circuitry of said electric device.

23

5

An array comprising

at least one material or material bundle, said material being a material according to any of the claims 1 to 13, said at least one material or material bundle being provided on a substrate, the length axis of said at least one material or material bundle extending essentially non-parallel to said substrate,

said at least one material or material bundle being provided with a molecule on the end distant from said substrate.

24

The array of claim 25, wherein said at least one material or material bundle is attached to said substrate or attached to a template arranged on said substrate.

a =

15

The array of claim 25, wherein said molecule is attached via a particle, preferably via a gold particle, to said at least one material or material bundle.

2000

25

30

Use of an array according to any of the claims 25 to 27 for detecting a binding of a molecule to said molecule provided on said at least one material or material bundle.

A method of arranging an array, said method comprising

providing at least one material or material bundle, said material being a material according to any of the claims 1 to 23,

arranging said at least one material or material bundle on a substrate or on a template on a substrate, the length axis of said material or material bundle extending essentially non-parallel to the surface of said substrate and/or said template on said substrate, and attaching a molecule to the end of said at least one material or material bundle remote from said substrate.

28		
~		

W. Use of a material according to any of the claims 1 to 13 for electric applications, said material being connected to or integrated in electric circuitry.

27

Material according to any of the claims 1 to B, said material being a nanowire, nanorope, nanorod, whisker or needle provided on one end thereof with a molecule.

30
32. Material according to claim 37, said material being a sensor.

21. Composition comprising a material according to any of the claims 1 to 13 and one or more materials selected from the group consisting of superconducting compound, lubricating compound, oil, polymer, glass, and gaseous compound.

5
